

2016

(May)

ZOOLOGY

(Major)

Course : 603

(Molecular Biology and Immunology)

Full Marks : 48

Pass Marks : 19

Time : 2 hours

*The figures in the margin indicate full marks
for the questions*

Answer Question No. 1 and **any two** from the rest

1. (a) Fill in the blanks : 1×5=5
- (i) An endocrine gland associated with immune system is ____.
 - (ii) When a single mRNA strand is transcribed by more than gene, it is known as ____.
 - (iii) The Okazaki fragments contain short pieces of DNA known as ____ strand.

(2)

(iv) B cells are distinguished from T cells by the presence of ____.

(v) zDNA was discovered by ____.

(b) Choose the correct answer : $1 \times 3 =$

(i) DNA replication is conservative/non-conservative/semi-conservative.

(ii) Tears contain IgA/IgG/All of the above.

(iii) HIV infects all of the following except monocytes/T cells/B cells.

(c) Differentiate between the following (any two) : $3 \times 2 =$

(i) Transformation and Transduction

(ii) Leading strand and Lagging strand

(iii) Active immunity and Passive immunity

(d) Write short notes on the following (any two) : $5 \times 2 = 10$

(i) Helper (T_H) cells

(ii) Genetic code and its properties

(iii) Structural genes

2. What is the role of major histocompatibility complex (MHC)? Explain with schematic diagram MHC class I and class II molecules.

$2 + (5 + 5) = 12$

(Continued

(3)

3. Explain the disorders associated with immunodeficiency and autoimmunity. Write the application of monoclonal antibodies.

$(4+4)+4=12$

4. Establish with experiments using bacteria and bacteriophage that DNA is a genetic material.

$6+6=12$
